

Job title: Research Associate III (contractor)

Job Description

We are seeking a qualified senior research associate (contractor) to join our team that focuses on protein characterization using mass spectrometry-based technologies. The successful candidate will design and carry out experiments, perform analyses and interpret analytical data to characterize proteins. The individual will work closely with our team members to conduct analytical work for multiple projects in Biopharmaceutical Development.

Qualifications:

The candidate must have excellent analytical laboratory instrumentation and protein analytics skills. A practical experience in sample preparation and HPLC analysis are required. Hands on experience in operating and maintaining mass spectrometers are highly desirable. The candidate should be self-motivated, well organized, attending to detail, and a good oral and written communicator. The candidate must be able to work well in a team environment and have good problem solving skills.
